

## Adding and Setting up a New Email Account - Android

Android devices use Gmail services as the default app for emails.

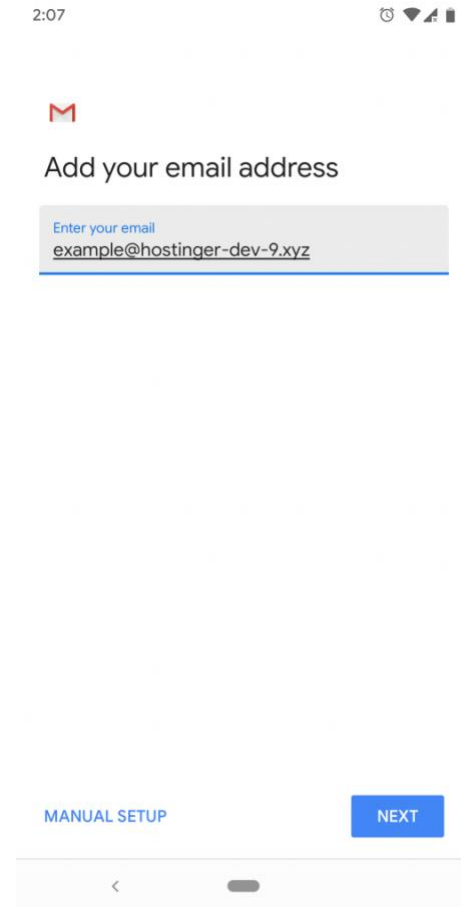

As alternative you can always access your webmail through: <https://webmail.hostinger.com>

Follow the instructions below to setup your account:

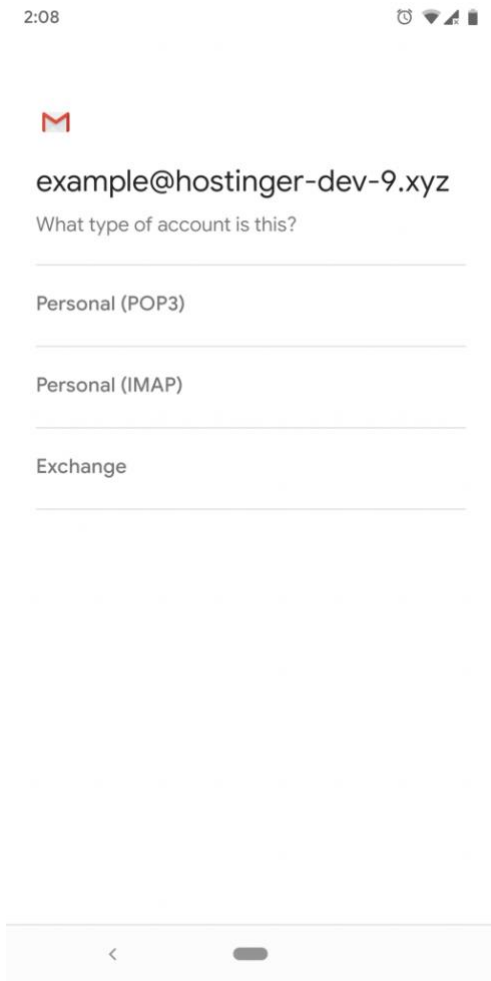

1. In the top right corner of your Gmail app, click on your account. There will be a new prompt. Choose the Add another account option. On the next page, choose Other.

2. Once you've entered your email provided by TUX, don't hit the Next button just yet. Instead, you need to select Manual Setup.

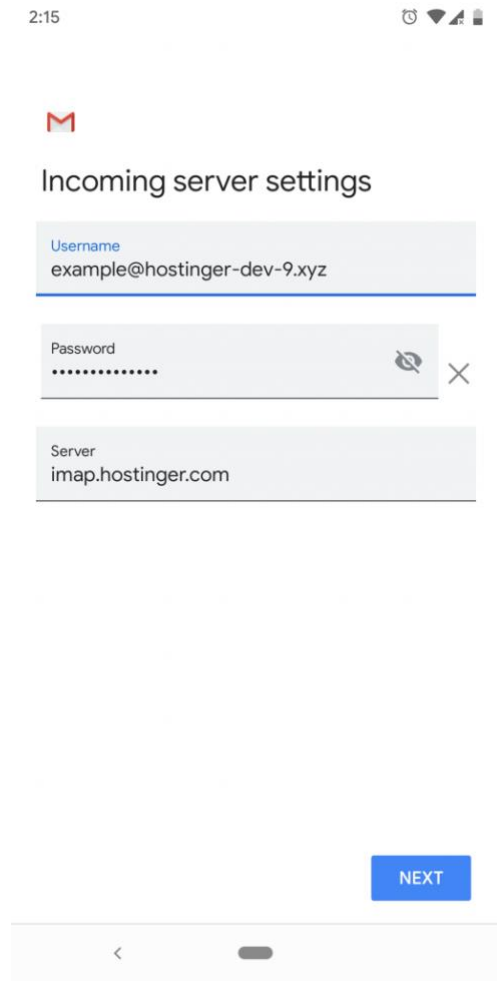

3. Now, you will have to choose what protocol you want to use to get your mail – POP3, IMAP, or Exchange. To have better synchronization from multiple devices, it is best to choose **IMAP** option. When all is done, enter your password.

4. Time to configure your Incoming Server Settings. You must specify your IMAP Server. In this case this would be: **imap.hostinger.com**

**Password would be provided by TUX and can be changed later (recommended).**

**If a user name is asked, please use your full email address.**

Sometimes you may be asked to enter a ports number. In that case, here's the details:

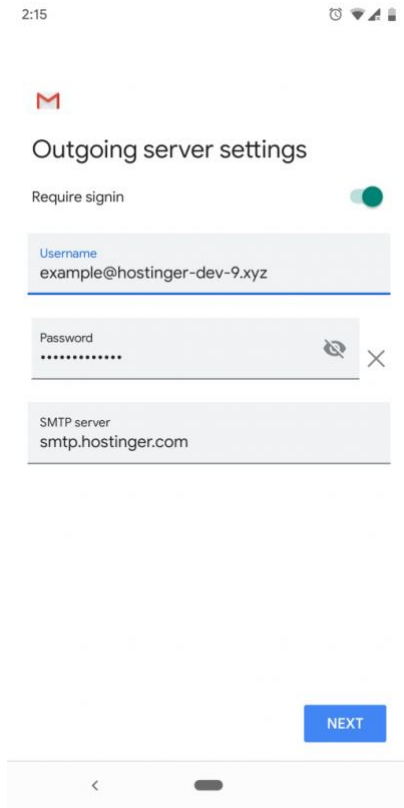

- **IMAP Port (Secured) — 993**
- **SMTP Port (Secured) — 587**

5. On the Outgoing Server Settings, enter your SMTP Server.

The SMTP would be: **smtp.hostinger.com**

**If a user name is asked, please use your full email address.**

Elevate the Experience of Your Business

6. Set your sync frequency and check any additional settings you would like to use.

7. Lastly, type in your account name and your personal name – or any name that you would like to use – so you could filter out messages from your personal account.
